

EPA P3 National Student Design Competition

Gray and Motloch, Ball State University
Proposal for Phase II

March 1, 2007

To whom it may concern,

Architecture 2030 supports the award of Phase II funding for the completion of the P3 pilot project proposed by Gray and Motloch at Ball State University.

Real-world demonstration projects on design school campuses illustrate possibilities for enhanced sustainability. Since this project is currently underway, and it has evidenced great interest and support throughout its target audiences, it has an excellent chance of succeeding as a valuable tool for understanding and further implementing the enormous potential of integrated design. Examples such as this, which are monitored and assessed for real world achievements, are also extraordinary and highly valuable in that they can provide the documentation crucial to raising awareness and proving viability. Please assist Ball State in completing this project and reaching their goals by awarding Phase II funding for this important project.

Thank you for your consideration.
